ISO 14236: 2000 Material PLAST

General

Términos y definiciones

1.1. Accesorio de compresión de empalme mecánico STP (Plast)

Accesorio en el que el empalme se realiza mediante la compresión de un aro o funda en la pared externa de la tubería con o sin elementos adicionales para su sellado y con o sin apoyo interno.

1.2. Diámetro nominal (dn)

Diámetro exterior nominal de la tubería que puede estar conectada al accesorio.

1.3. Presión nominal (PN)

Presión máxima de funcionamiento en la que un componente de un sistema de tuberías se le exige que funcione, en condiciones normales de servicio. Los accesorios Plast están pensados para una PN 16.

1.4. Presión proyectada (s)

Presión permisible para una aplicación dada.

1.5. Presión de prueba (s)

Presión para el período de pruebas y para la temperatura relevantes.

Clasificación de accesorios PLAST

De acuerdo con el sistema de conexión Tipo 1: accesorios de sujeción externa (accesorios de tipo compresión), que sujetan la tubería sólo en su superficie exterior, de acuerdo con la resistencia de los accesorios a las fuerzas longitudinales que se desarrollan como resultado de la presión interna como sigue:

Clase 1: accesorios de compresión que aguantan el peso en el extremo.

Material (PLAST)

El material del accesorio Plast que está en contacto con el agua es conforme a las normas internacionales, donde son aplicables, y no deberá contener aditivos tóxicos. El cuerpo del accesorio Plast es opaco. Cuando se mide de acuerdo con la ISO 7686, el porcentaje de luz que pasa a través de la pared del accesorio es menor o igual a 0,2%. La composición de las partes de plástico del accesorio, expuestas a radiaciones ultravioleta, incluye un estabilizador para éstas.

El accesorio Plast está compuesto de los materiales plásticos indicados en la TABLA 01.

General

Terms and definitions

1.1. STP Mechanical-joint compression fitting (Plast) Fitting in which the joint is made by the compression of a ring or sleeve on the outside wall of the pipe with or without additional sealing elements and with or without internal support

1.2. Nominal Size (dn)

Nominal outside diameter of the pipe which can be connected to the fitting

1.3. Nominal pressure (PN)

Maximum working pressure at which a piping component is required to operate under normal service conditions, Plast fittings are designed for a PN 16

1.4. Design stress (s)

Allowable stress for a given application

1.5. Tests stress (s)

Stress for the relevant test period and temperature.

Classification of fittings PLAST

According to the connecting system

Type 1: external-grip fittings (compression-type fittings), which grip the pipe only at its outer surface, according to the resistance of the fittings to the longitudinal forces which develop as a result of the internal pressure, as follows:

Class 1: end-load-bearing compression fittings.

Material (PLAST)

The material of the Plast fitting which is in contact with the water conforms to relevant national standards, where applicable, and shall not contain toxic additives. Plast fitting body is opaque. When measured in accordance with ISO 7686, the percentage of light which passes through the wall of the fitting is less than or equal to 0,2%. The composition of the plastics parts of the fitting exposed to ultra-violet radiations includes a UV stabilizer.

Plast fitting is made with the plastic materials shown in TABLE 01.

Général

Termes et définitions

1.1. Raccord mécanique à jonction par compression STP (Plast)

Raccord dans lequel la jonction est réalisée par la compression d'une bague de joint thorique ou à lèvres sur la paroi extérieure d'un tube, avec ou sans élément d'étanchéité supplémentaire, et avec ou sans raidisseur interne.

1.2. Diamètre nominale (dn)

Diamètre extérieur nominal du tube qui peut être assemblé au raccord.

1.3. Pression nominale (PN)

Pression maximale de service à laquelle un composant de canalisation doit fonctionner dans des conditions normales de service.

1.4. Contrainte de calcul (s)

Contrainte admissible pour une application donnée

1.5. Contrainte d'essai (s)

Contrainte d'essai pour la durée et la température de l'essai concerné

Classification des raccords Plast

Selon le système de raccordement, comme suit:

Type 1: raccords à serrage externe (raccords du type compression), qui serrent uniquement le tube à sa surface externe, selon la résistance du raccord à des forces axiales dues à la pression interne, comme suit:

Classe 1 : raccords par compression résistants aux effets de fond.

Matière (PLAST)

La matière des éléments du raccord PLAST qui sont au contact de l'eau respecte les normes nationales, ou elle s'applique, et ne contient pas d'additifs toxiques. Le corps du raccord est opaque. Lorsque les essais sont réalisés conformément à l'ISO 7686, le pourcentage de lumière qui traverse la paroi du raccord est inférieur ou égal a 0,2%. La composition des parties en matières plastiques du raccord exposé aux rayons ultraviolets comporte un stabilisant UV.

Le raccord Plast est composé des matières en plastique indiquées au TABLEAU 01.

Materiales / Plástico fitting materials Material / Plastic fitting materials Matières / Matières des raccords en plastique

Fitting material	MRS MPa	Specified design stress S MPa
PP-B tuerca / nut cuerpo / body arandela de apriete / pressing ring	8	6,3
POM arandela de agarre /grip ring NBR junta tórica / O-ring	10	6,3

TABLA / TABLE 01

Roscas Plast

El tamaño y la longitud de las roscas de unión para las conexiones del sistema de suministro de agua, son conformes a la ISO 7-1. Las roscas de sujeción son conformes a la ISO 228-1.

CARACTERÍSTICAS HIDRÁULICAS Y MECÁNICAS

Los accesorios se someten a prueba de acuerdo con las normas internacionales. Para este propósito, estando los accesorios unidos a las tuberías de polietileno conforme a la ISO 4427. La presión nominal de las tuberías usadas en la prueba es equivalente a la presión nominal de los accesorios.

NOTE 1 // 1 bar=0,1 MPa

Accesorios de plástico Métodos de prueba y requisitos para los accesorios PLAST

Prueba del material / valor MRS

El polipropileno copolimero (PP-B) especificado para el cuerpo del accesorio se somete a prueba de acuerdo con la ISO 9080 y la ISO 12162 para determinar el valor MRS. Verificación del funcionamiento a largo plazo.

El resultado a largo plazo del material del cuerpo del accesorio Plast se verifica en una prueba tipo de una muestra de tubería de molde de inyección con un diámetro exterior de no menos de 50 mm fabricado según la ISO 15853 con el mismo material que el del cuerpo del accesorio. El grosor de la pared de la muestra no es menor que el de una tubería de PN6 ni mayor que el de una tubería de PN 16 del tamaño correspondiente y del mismo material.

Cuando la muestra es probada en cuanto a presión de acuerdo con el procedimiento descrito en la ISO 1167, es conforme al requisito aplicable. (TABLA 02)

Plast threads

The size and length of jointing threads for connections with the water supply system are conform to ISO 7-1. Fastening threads are conform to ISO 228-1

MECHANICAL AND HYDRAULIC CHARACTERISTICS

The fittings are tested according to International Standards. For this purpose, the fittings joined to polyethylene pipes conforming to ISO 4427. The nominal pressure of the pipes used in the test is equivalent to the nominal pressure of the fittings.

NOTE 1// 1 bar=0,1 MPa

Plastic Fittings Test methods and requirements for the PLAST fittings

Testing of material / MRS value

The Polypropylene Copolymer (PP-B) specified for the fitting body is tested in accordance with ISO 9080 and ISO 12162 to determine the MRS value. Verification of long-term behavior

The long-term behaviour of the material of the Plast fitting body LS verified in a type test on an injection-moulded pipe specimen with an outside diameter of not less than 50 mm produced in accordance with ISO 15853 from the same material as that of the fitting body. The wall thickness of the specimen is not less than that of a PN 6 pipe and not more than that of a PN 16 pipe of the corresponding size and of the same material.

When the specimen is pressure-tested in accordance with the procedure described in ISO 1167, it conforms to the applicable requirement. (TABLE 02)

Filetages Plast

Les dimensions et la longueur des filetages des-tinés au raccordement dans les cas des systèmes d'adduction d'eau sont conformes à l'ISO 7-1. Les filetages de fixation sont conformes à l'ISO 228-1.

CARACTÉRISTIQUES MECÁNIQUES ET HYDRAULIQUES

Les raccords sont soumis à essai en accord à la Norme internationale. A cet effet, les raccords sont assemblés aux tubes en polyéthylène conformément à l'ISO 4427. La pression nominale des tubes utilisés pour les essais est équivalente à la pression nominale des raccords.

NOTE 1 // 1 bar=0,1 MPa

Raccords en plastique Méthode d'essai et exigences de raccords Plast

Essai de la matière / valeur de MRS

Le polypropylène copolymère (PP-B) spécifié pour le corps du raccord est déterminé conformément à l'ISO 9080 et à l'ISO 12162, afin de calculer la valeur de MRS.

Le comportement de longue durée de la matière du corps du raccord est vérifié par un essai de type dur des éprouvettes tubulaires moulées par injection, d'un diamètre extérieur supérieur ou égal à 50mm, fabriquées conformément à l'ISO 15853, en une même matière que celle du corps du raccord. L'épaisseur de paroi de l'éprouvette n'est pas inférieure à celle d'un tube de PN 6, ni supérieure à celle d'un tube de PN 16, de la dimension correspondante et en une même matière.

Si l'éprouvette est soumise à un essai de pression conformément au mode opératoire décrit dans l'ISO 1167, les exigences données sont satisfaites. (TABLEAU 02).

Requisitos de rendimiento para los accesorios Plast Performance requeriments for Plast fittings Exigences de performances des raccords Plast

Prueba del material		Testing of material	Essai de la matière	
Fitting material	Test temperature °C	Test duration h	Induced MPa	Requirement

TABLA / TABLE 03

PRUEBAS DE LOS ACCESORIOS

Resistencia a la presión interna
Cuando el cuerpo del accesorio de inyectado Plast es sometido a prueba de acuerdo con la ISO 12092 usando los parámetros de prueba dados en la tabla 03, es conforme a los requisitos aplicables dados en dicha tabla.

NOTA // Los requisitos de la prueba están relacionados con la PN del accesorio

TESTING OF FITTINGS

Resistance to internal pressure
When a Plast injection-moulded fitting body is tested in accordance with ISO 12092 using the test parameters given in table A, it conforms to the applicable requirements given in such table.

NOTE // The test requirements are related to the PN of the fitting.

ESSAI DES RACCORDS

Résistance à la pression interne
Lorsque le corps d'un raccord moulé par injection Plast est soumis à essai conformément à l'ISO 12092 avec les paramètres d'essai indiqués dans le tableau 3, il répond aux exigences applicables données dans ce tableau.

NOTE // les exigences d'essai sont liées à la PN du raccord.

PRUEBA DE CONJUNTO

Muestras de prueba

Cada muestra de prueba incluye un accesorio Plast ensamblado con un PE (*) PN 16 si los diámetros son de 16 mm a 63 mm y PN 10 para 75-90-110 mm.

ASSEMBLY TEST

Test specimens

Each test specimen comprises a Plast fitting assembled with a PE (*) PN 16 if diameters are from 16 mm To 63 mm and PN 10 for 75-90-110 mm.

ESSAIS D'ASSEMBLAGE

Eprouvettes

Chaque éprouvette comprend un raccord assemblé au tube en PE (*) PN 16 du diamètre 16mm jusqu'à 63mm et PN 10 du diamètre 75mm jusqu'à 110mm.

ESTANQUEIDAD BAJO PRESIÓN INTERNA CUANDO SE SOMETE EL TUBO A CURVATURA

Quando un conjunto manguito de accesorio rectilíneo Plast se somete a prueba de acuerdo con la ISO 3503, el ensamblaje es conforme a los requisitos siguientes (tabla 04).

LEAKTIGHTNESS UNDER INTERNAL PRESSURE WHEN SUBJECTED TO BENDING

When a straight Plast fitting (coupling) assembly is tested in accordance with ISO 3503, the assembly conforms to the following requirement (Table B).

ETANCHÉITÉ À LA PRESION INTERNE QUAND L'ASSEMBLAGE EST SOUMIS À UNE COURBURE

Quand un raccord droit (manchon) est soumis à essai conformément à l'ISO 3503, l'assemblage répond aux exigences données dans le tableau 4.

Requisitos de rendimiento para ensamblajes de accesorios de compresión Plast
Estanqueidad sobre el goteo bajo presión interna cuando se somete a curvatura
Performance requirements for Plast compression fitting assemblies
Leaktightness when subjected to bending
Exigences de performances d'assemblage des raccords à compression Plast
Étanchéité lorsqu'ils sont soumis à une courbure

Pipe material	Test temp. °C	Test durat. h	Test stress, σ_T MPa	Test Pressure, σ_S bar	Requirement
PE 63	20°±5	1 h	9,0	1,8xPN	No deben presentarse fugas ni roturas durante la prueba No failures (leakage, fractures, cracking) in joint area of fitting or pipe during either test period
PE 80	20°±5	1 h	11,4	1,8xPN	
PE 100	20°±5	1 h	14,4	1,8xPN	

TABLA / TABLE 04

La presión de la prueba r se calculará, en bars, con la ecuación:

$$\rho_T = \frac{\sigma_T}{\sigma_S} \times PN$$

en la que
 s_t es la presión aplicable en la prueba dada en la tabla C (MPa)

s_s es la presión proyectada de acuerdo con la ISO 4427

PN es la presión nominal (16 bars de \varnothing 16 a \varnothing 63)

NOTA 1 // 1 bar = 0,1 MPa

NOTA 2 // Para diámetros mayores de 63 mm, el uso de equipo especial podría ser necesario para crear el radio de curvatura requerido para la tubería de la prueba.

The test pressure r shall be calculated, in bars, from the equation:

$$\rho_T = \frac{\sigma_T}{\sigma_S} \times PN$$

where

s_t is the applicable test stress given in the table C (MPa);

s_s is the design stress in accordance with ISO 4427

PN is the nominal pressure (16 bars from \varnothing 16 to \varnothing 63)

NOTE 1 // 1 bar = 0,1 MPa

NOTE 2 // For diameters larger than 63 mm, the use of special equipment might be necessary to create the bending radius required for the pipe under test.

La pression d'essai en bars, sera calculée à l'aide de la formule suivante:

$$\rho_T = \frac{\sigma_T}{\sigma_S} \times PN$$

Où

s_t est la contrainte d'essai applicable donnée dans le tableau 4 (MPa)

s_s est la contrainte de calcul conforme à l'ISO 4427

PN est la pression nominale (16 bars du \varnothing 16 jusqu'à \varnothing 63)

NOTE 1 // 1 bar=0,1 MPa

NOTE 2 // Pour les diamètres supérieurs à 63mm, il peut être nécessaire d'utiliser un équipement spécial pour créer le rayon de courbure requis sur le tube soumis à essai.

RESISTENCIA A LA TRACCIÓN

Cuando un ensamblaje de un accesorio Plast está sometido a prueba de acuerdo con la ISO 3501, el ensamblaje es conforme a los requisitos dados en la tabla C, calculando en newtons la fuerza de la prueba (FP).

$$(FT = 1,5 s_t TTe_n (d_i - e_n))$$

RESISTANCE TO PULL-OUT

When a Plast fitting assembly is tested in accordance with ISO 3501, the assembly conforms to the requirements given in the table C, the test force FT being calculated, in newtons.

$$(FT = 1,5 s_t TTe_n (d_i - e_n))$$

RÉSISTANCE À L'ARRACHEMENT

Lorsqu'un raccord assemblé est soumis à essai conformément à l'ISO 3501, l'assemblage est conforme aux exigences données dans le tableau 5, la force d'essai Ft calculée en newtons.

$$(FT = 1,5 s_t TTe_n (d_i - e_n))$$

Requisitos de rendimiento para conjuntos de accesorios de compresión Plast / Prueba de arrancamiento
Performance requirements for Plast compressions fittings assemblies / Pull-out test
Exigences de performances d'assemblage des raccords à compression Plast
Essai de résistance à l'arrachement

Pipe material	Test temp. °C	Test durat. h	Test stress, σ_T MPa	Requirement
PE 63	20 \pm 5	1 h	4,5	El desplazamiento de la tubería no debe afectar a la estanqueidad
PE 80	20 \pm 5	1 h	5,7	Displacement of pipe during test does not affect leaktighness of joint
PE 100	20 \pm 5	1 h	7,2	

TABLA / TABLE 05

a / Estas son tensiones longitudinales y sus valores son por tanto la mitad de aquellos de las tensiones circunferenciales dadas como tensiones de prueba en la tabla 05.

ESTANQUEIDAD A PRESIÓN HIDROSTÁTICA INTERIOR

Cuando un conjunto de accesorio Plast es sometido a prueba a dos presiones de acuerdo con la ISO 3459, el ensamblaje es conforme al requisito de rendimiento. (Tabla 06)

a / These are longitudinal stresses, and their values are therefore half those of the circumferential stresses given as test stresses in table 05.

LEAKTIGHTNESS UNDER INTERNAL VACUUM

When a Plast fitting assembly is tested at two pressures in accordance with ISO 3459, the assembly conforms to the performance requirement. (Table 06)

a / Il s'agit de contraintes axiales ; leurs valeurs sont donc égales à la moitié des valeurs des contraintes circonférentielles données dans le tableau 05 en tant que contraintes d'essai.

ÉTANCHÉITÉ SOUS VIDE INTERNE

Lorsqu'un raccord assemblé Plast est soumis à essai à deux pressions conformément à l'ISO 3459, l'assemblage est conforme aux exigences de performance. (Tableau 06)

Requisitos de rendimiento para ensamblajes de accesorios de compresión Plast. Hermetismo contra el goteo con vacío.

Performance requirements for Plast compressions fittings assemblies. Leaktighness under vacuum.

Exigences de performances d'assemblage des raccords à compression Plast. Étanchéité sous vide.

Pipe material	Test temp. °C	Test durat. (two periods)	Test Pressure bar	Requirement
PE 63	20±5	1 h	0,1+0,05	No deben presentarse fugas
PE 80		seguido de		
PE 100		1 h	0,8+0,0	No leakage during either test period

TABLA / TABLE 06

PRUEBA DE PRESIÓN A LARGO PLAZO PARA ESTANQUEIDAD DE ACCESORIOS

LONG-TERM PRESSURE TEST FOR LEAKTIGHTNESS OF ASSEMBLED JOINTS

ESSAI DE PRESION DE LONGUE DURÉE POUR L'ÉTANCHÉITÉ DES ASSEMBLAGES

Cuando un ensamblaje que comprende al menos un accesorio Plast con una o más tuberías unidas a él es sometido a prueba de acuerdo con la ISO 1167, el empalme es conforme a los requisitos necesarios como se muestra en la tabla 07.

When an assembly comprising at least one Plast fitting with one or more pipe(s) jointed to it is tested in accordance with ISO 1167, the joint conforms to the needed requirement as it is shown (Table 07).

Lorsqu'une éprouvette comportant au moins un raccord Plast assemblée à un ou des tubes est soumise à essai conformément à l'ISO 1167, l'assemblage est conforme aux exigences données dans le tableau 07.

Cálculo de la presión que se debe usar para las pruebas de estanqueidad a largo plazo. Estimación de vida: 50 años

Calculation of pressure to be used for long-term leaktighness testing. Estimeted life: 50 years

Calcul de la pression à utiliser pour les essais d'étanchéité de longue durée. Estimation de vie: 50 ans

La prueba de estanqueidad a largo plazo para los empalmes mecánicos con accesorios hechos de materiales de plástico se basa en el principio de que estos empalmes tendrán que mantenerse herméticos durante toda la vida de servicio del ensamblaje, es decir, 50 años. Esto requiere que cualquier deformación que ocurra en la zona del empalme debido al deslizamiento no cause ningún goteo.

The long-term leaktighness test for mechanical joints with fittings made of plastics materials is based on the principle that these joints will have to remain watertight for the whole service life of the assembly, i.e. 50 years. This requires that any deformation occurring in the joint area due to creep does not cause any leakage.

Les essais d'étanchéité de longue durée des assemblages mécaniques des raccords en matières plastiques sont fondés sur le principe que ces jonctions doivent être étanches à l'eau pendant toute la durée de service de l'assemblage, c'est-à-dire 50 ans. Cela implique que les déformations dues au fluage dans la zone de jonction ne provoquent aucune fuite.

Por lo tanto, la prueba llevada a cabo en condiciones tales que la deformación por deslizamiento prevista después de 50 años se alcanza en 1000 h. La presión en el material del accesorio correspondiente a la presión nominal en el sistema en 50 años se puede determinar mediante los diagramas sincrónicos de la tensión / presión para el material en la temperatura de funcionamiento.*

The test is therefore carried out under conditions such that the expected creep deformation after 50 years is reached in 1000h. The strain in the fitting material corresponding to the nominal stress in the system over 50 years can be determined from isochronous stress/strain diagrams for the material at the service tempe-ratura.*

Les essais sont donc effectués dans de conditions telles que la déformation due au fluage, prévue au bout de 50 ans, soit atteinte en 1000 h. la déformation de la matière du raccord, correspondant à la contrainte nominale dans le système pendant 50 ans, peut être déterminée à l'aide de diagrammes isochrones contrainte/ déformation de la matière à la température de service.*

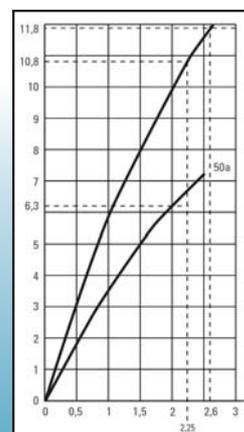

Requisitos de rendimiento para ensamblajes de accesorios de compresión Plast. Prueba de estanqueidad a largo plazo.

Performance requirements for Plast compressions fittings assemblies. Leaktighness of assembled joints.

Exigences de performances des raccords à compression Plast. Étanchéité des assemblages.

Fitting material	Pipe material	Test durat. (two periods)	Test temp.	Test pressure bar	Requirement
PP-B	PE 63	1000 h	20°C and	1,2 x PN	No deben presentarse fugas ni grietas en la tubería durante los periodos de prueba
	PE 80				
	PE 100	1000 h	40°C and	0,8 x PN	No leakage from joint or cracking of pipe during either test period

**INSTALACIÓN PUSH FITTING
 PUSH FITTING ASSEMBLY
 ASSAMBLAGE DU PUSH FITTING**

INSTALACIÓN GRANDES DIÁMETROS · BIG DIAMETERS ASSEMBLY · ASSAMBLAGE DIAMETRES GRANDS

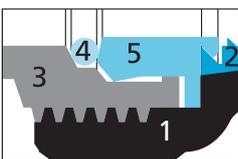

IMPORTANT DURING ASSEMBLY

The pipe must always go through the O-ring to perform a good hydraulic work. Once the pipe is assembled properly, you should screw the exterior nut tightly so that the hydraulic and mechanical work of the **PLAST** fittings offer their maximum performance.

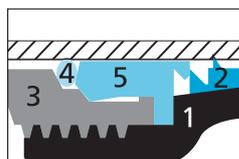

IMPORTANT PENDANT L'INSTALLATION

Le tuyaux doit toujours passer le joint torique afin que le travail hydraulique se réalise correctement. Une fois le tuyau bien installé serrer fortement l'écrou extérieur afin d'obtenir un rendement maximal du travail hydraulique comme mécanique du raccord **PLAST**.

3. Cuerpo - Body - Corps
4. Junta tórica - O-ring-Joint torque
5. Casquillo - Compression ring
Bague de compression

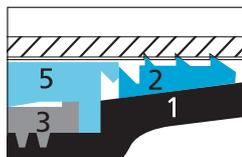

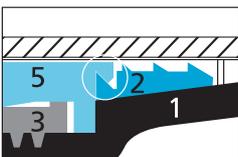

La tuerca, a través del casquillo, mantiene siempre presionada la junta tórica. El diseño cónico del fondo del casquillo y del cuerpo favorece la presión de la junta contra el tubo, independientemente de la presión interna del mismo.

Due to the pressing-ring, the nut always keeps the O-ring under pressure. The conical design of the pressing-ring and the nut allows the pressure of the ring against the pipe, independently of its internal pressure.

L'écrou maintient toujours le joint torique serré grâce à la bague. Le dessin conique du fond de la bague et du corps favorise à la pression du joint contre le tuyau, indépendamment de la pression interne de celui-ci.

TRABAJO MECÁNICO - MECHANICAL WORK- L'EXERCICE MECANIQUE

El especial diseño del accesorio permite al bicono acompañar al tubo en su natural desplazamiento debido a la tracción, aumentando el agarre sobre el mismo.

The special design of the fitting allows the clenching ring to go with the pipe in its natural movement due to the pull out while the clenching ring increases the resistance and holds firmly the pipe.

Le dessin particulier de l'accessoire permet au bicono d'accompagner le tuyau lors de son déplacement naturel dû à la traction, en augmentant son adhésion sur celui-ci.

ACCESORIOS DE PP A COMPRESIÓN PARA TRANSICIONES.

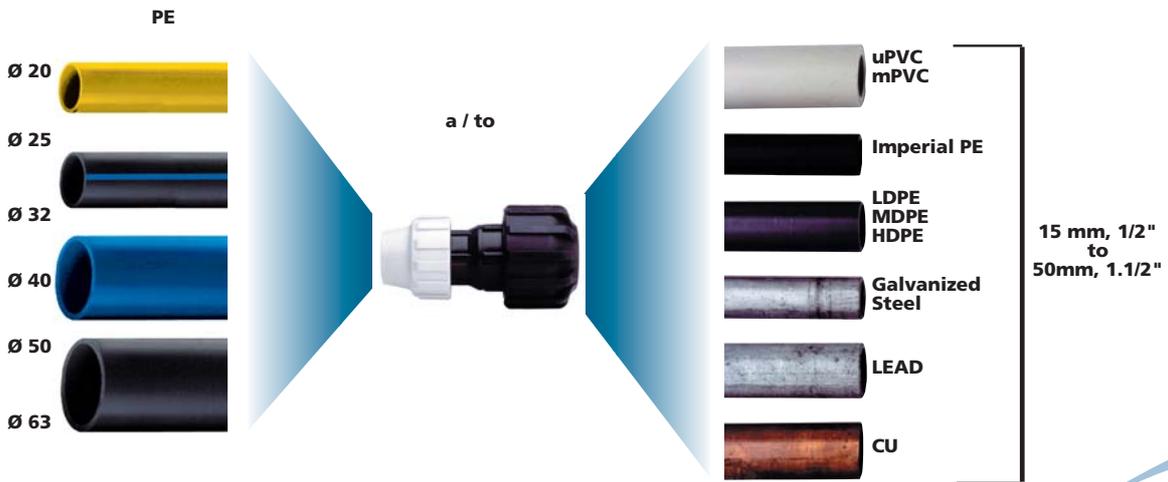

Transición de tuberías de polietileno en medidas métricas

PP COMPRESSION FITTINGS FOR TRANSITIONS.

Transition from polyethylene pipes in metric measures

RACCORDS EN PP À COMPRESION POUR TRANSITIONS.

Transition de tuyaux en polyéthylène en mesures métriques

cualquier tubería metálica o de plástico (15mm(1/2")- 50mm(1 1/2"))
 any metallic or plastic pipe (15mm(1/2")- 50mm(1 1/2"))
 n'importe quels tuyaux métalliques ou en plastique (15mm(1/2")-50mm(11/2"))

FLOWQUEST

Ideal para compañías de aguas por el ahorro de tiempo que supone.

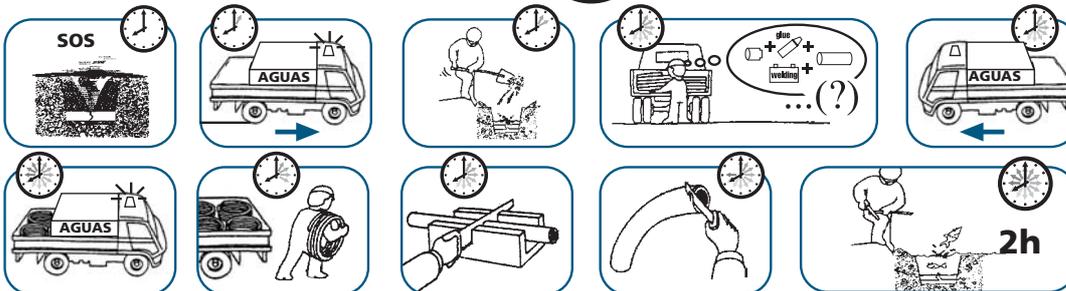

It is perfect for water companies because this can save a lot of time.

Ideal pour les compagnies des eaux pour l'importante economie de temps.

KIT UNIVERSAL

Kit adaptador universal compatible con cualquier accesorio de STP y permite pasar de tubería de cualquier material y cualquier medida entre 15 y 63 mm. (1/2" o 1 1/2") a polietileno métrico de 16, 20, 25, 32, 40, 50, 63 mm.

1. NUT: PP copolymer
2. SPLIT-RING: POM (acetal resin) + stainless steel teeth
3. PRESSING RING: PP copolymer
4. UNIVERSAL ADAPTOR: NBR (Patent pending)

The universal STP kit is compatible with any STP fittings, allowing the transition between pipes of any materials with diameters from 15 mm to 63 mm (1/2" to 1 1/2") and polyethylene pipes between 16, 20, 25, 32, 40, 50, 63 mm.

Kit adaptateur universel compatible avec tous les accessoires de STP. Permet de connecter tous types de tuyaux de 15 à 63 mm (1/2" à 1 1/2") au polyéthylène métrique de 16, 20, 25, 32, 40, 50, 63 mm.

COMO COLOCAR LAS TUBERÍAS EN EL ADAPTADOR UNIVERSAL · HOW TO INSERT THE PIPE INTO THE UNIVERSAL ADAPTER · COMMENT INSÉRER LES TUYAUX DANS LE RECCORD UNIVERSEL

Coloque el tubo dentro de la junta universal.

Just place the pipe into the rubber adapter.

Installer le tuyau dans le joint univereal.

El tubo no debe atravesar la junta universal.

Do not push the pipe through the rubber adapter.

Le tuyau ne doit pas traverser le joint univereal

CERTIFICACION

SUBJECT MECHANICAL JOINTS FOR POLYETHYLENE PIPES

IDENTIFICATION:
- mechanical joint: STP system
- pipe: mat. NESTE-mp 501610LU
- pipe: Polyethylene

TESTS:
The mechanical joints between fittings and polyethylene pipes are tested according the following standards:
ISO 3001 Assembled joints between fittings and polyethylene pressure pipes. Test of resistance to pull out.
ISO 3458 Assembled joints between fittings and polyethylene pressure pipes. Test of leakproofness under internal pressure.
ISO 3583 Assembled joints between fittings and polyethylene pressure pipes. Test of leakproofness under internal pressure when subjected to bending.
ISO 3459 Polyethylene pressure pipes. Joints assembled with mechanical fittings. Internal under pressure test method and requirement.

RESULTS:
The assembled joints with polyethylene pressure pipes STP system have supported an internal pressure about 2.5 MPa without leakage. The temperature of water is between 20 and 25 °C.
According to standard the test pressure is $P_{t,0.1} = 3 \cdot P_{t,0.2} = 3 \cdot 0.82 \cdot 1.05 P_n = 2.61 MPa$
The same results have supported with assembled joints subjected to bending.
The assembled joints with polyethylene pressure pipes have supported an internal under pressure between 0.21 MPa $\leq \Delta P \leq 0.08 MPa$ without leakage.
All mechanical joints have resisted a pull-out force $> 1.132 N$.

CONCLUSION:
The assembled joints STP system have passed the ISO standards.
